## Summary

## Work Experience

### Media Reflex

**Location:** Bangkok

July 2008 – Sept 2008

During my summer break from university I had the opportunity to work for Media Reflex and finish some of their outstanding work. My responsibilities were to implement designs, manage technical issues and advise them on IT issues.

### NHS Intercon

**Location:** Bangkok

Sept 2006 – Sept 2007

Originally I had arranged with my university to work at NHS Intercon as part of my course's work experience. One week before I was due to leave, the university reversed their decision citing that Thailand was too dangerous. Luckily NHS Intercon were happy enough to take me on as a full time employee for a year instead.

My duties at NHS Intercon were like any other full time developer that worked for the company. I was responsible for large websites and had to communicate with clients as well as work effectively with team members.

## Education

### Computer Games Programming BSc

**Location:** Huddersfield

Finished June 2009

Topics on my university course covered a whole range of material from software development models, programming in DirectX, shaders, neural networks and network programming.

### Information Technology National Diploma

**Location:** Milton Keynes

Finished August 2004

My national diploma was completed at Milton Keynes College. The course covered a variety of topics such as c++ and allowed me to progress to university to complete my bachelor of science degree.
